'PB with world.aa file : checked the 106old & 106str values'

When finalizing an order, you get the message: PB with world.aa file : checked the 106old & 106str valuesSolution ID: S03193
This error usually means that the store was not updated properly. To fix this, go to the data directory and delete the file in that directory called 'VERSION'. After deleting this file, re-run wwwinstall.cgi, choosing Upgrade instead of New Install.
This should fix the problem.
