How can I make the images that I uploaded appear smaller?

How can I make the images that I uploaded appear smaller?
Solution ID: S02579
ShopSite assigns the images the height and width value of the actual image. If you want this smaller, there's two things that you can do. Open up the image on your PC in an image editor and make the actual file smaller. Also, if you're familiar with HTML, you can go into the Images section of the back office, select the image that you want to change the size of, and click on the 'Edit Image Attributes' button. Here you can edit the height and width attributes of the image.
