

## **ShopSite Knowledgebase**

### **pages don't appear how they were intended to look**

Products in the ShopSite store are presented properly, but the formatting of the page does not look good, or does not allow enough space between items. Solution ID: S02444

Select a different template for the products, this will allow for different formatting of the page and may make the page more appealing.

Also, remember that your own HTML tags can be inserted into any of the ShopSite text fields. This allows you to align your text, change fonts, etc.
