TRICK - How do I integrate ShopSite into my existing web site?

How do I integrate ShopSite into my existing web site?Solution ID: S03216
There are a couple of things that you can do here:
1. Use all of your existing shopping pages and use the Create Links feature (this feature is called OrderAnywhere in 4.x) to add order/checkout links to those pages. To do this in 3.x, go to Main -> Utilities -> Create Links. In 4.x, go to Main -> Merchandising -> OrderAnywhere.
2. Take your existing pages and cut and paste the HTML code into the text fields of ShopSite. This takes some understanding of HTML, because you're not going to be cutting and pasting the entire page, just those parts that you want in the page.
3. Recreate the pages through ShopSite. Although this sounds more difficult, I'd recommend at least trying this one - it might turn out that recreating the pages through ShopSite will be much easier than anything else.
