ShopSite Knowledgebase

Changing the values for ShopSite directories.

I need to change the value of the data directory or the output directory in ShopSite, but when I go to the configuration screen, it's grayed out and I can't change it. Solution ID: S03218
This information can't be changed through the browser for security reasons. To change this, you must either telnet or ftp to your server and edit the .aa file in your back office directory (in NT stores this file is located in the shopping basket directory).
