How do I startup/shutdown ShopSite when I'm preparing to reboot the server?

How do I startup/shutdown ShopSite when I'm preparing to reboot the server?

This solution applies to every version of ShopSite SC and ShopSite TX. Solution ID: S03220

ShopSite is simply a collection of cgi scripts that only run when called from a browser. So for startup and shutdown, as long as you are properly shutting down your web server, there is nothing extra that you have to do for ShopSite.
