

## **ShopSite Knowledgebase**

### **Ability to implement Custom Pages(Smart Tags) and Order API**

The following will discuss the ability of users to implement Custom Pages and Order API

Solution ID: S03541

Users often want to use Custom Pages and Order API to do some special customizing to their system.

Custom pages will give the client the ability to create pages in another application and allow the user to link them to the Shopsite databases. It allows them to control the layout of their pages within Shopsite. Order API is used to do things such as writing scripts to do things that Shopsite cannot normally do, such as integrating other applications, and also changing some of the existing features in Shopsite. They need to know how to write the scripts on their own for the most part. The key factor here is the client must have Shopsite Pro in order to do these things. If they do not, they will not be able to access these Custom Pages and Order API section as the Manager, Express, and Lite stores do not have this functionality.
