### **How do I replace my home page (index.html) after creating one with the Wizard function?**

Product: ShopSite SC and ShopSite TX

Version: v4.x

A home page was created when I set up my store using the Wizard function. I would like to replace this page with a new page. Solution ID: S03732

Delete the original page from Pages | Advanced Editing. Rename the replacement page as "index.html" under Pages | Advanced Editing | Edit Page Content -> Advanced Info -> File Name. Publish changes. Solution ID: S03732

To create a new page by reusing the Wizard function, delete the page from Pages | Advanced Editing and remove the wizard.aa file located in the data directory. You may then use Utilities | Wizard to make a new page.
