

## **ShopSite Knowledgebase**

**Font in the More Information Pages is not displaying as it is intended to look (problems with color and size).**

Product: ShopSite SC + TX

Version: 4.2x

Platform: ALL

Font in the More Information Pages has different colors, sizes than intended. Solution ID: S03841

There are several ways to modify the font on the More Information Pages. Three of the more commonly used areas to troubleshoot:

- 1) More Info Page Text Box - under individual product's advanced editing screen found under Product | Edit Product Info
- 2) More Info Pages - under Preferences
- 3) Page Header & Footer - if the header and footer check boxes are used in option #2, changes made under this Preferences screen may also be involved.

Check to make sure that all font tags in the HTML inserted in these locations have end tags. This ensures that changes meant for a certain section do not extend beyond the intended text.
