### **How do I uninstall my ShopSite store?**

How do I remove my installation of ShopSite or uninstall it?

Solution ID: S03917

The best way to handle this would be to do an `rm *.*` in each one of the shopsite directories on Unix servers. These directories would be the `ss`, `sc`, and `data`, and also the main shopsite directory that resides above these three core shopsite directories. If you are running an NT server, you would just need to delete these directories in a manner that the Windows interface allows (Right Click-> Delete files residing in these key directories).

**\*\*There are other ways to disable the store other than this, but that is a different goal and is a little different from the above\*\*.**
