

ShopSite Knowledgebase

Unable to use [Enter] key for searching products or pages databases through the merchant screens (products.cgi).

Product: SC + TX

Version: 5.0.x

Platform: ALL

In previous releases of ShopSite, I was able to use the [Enter] key to display the same results as selecting "Search" when querying the databases through my backoffice Products screen. The [Enter] key is no longer an option in 5.0. When used, the search field is emptied and no results are displayed. Solution ID: S04415

Use of the [Enter] key as an alternate submit option was not preserved when making other improvements to the search feature. The search results are still displayed when the "Search" button is selected.

The [Enter] key functionality was restored in the v5.0.1.6 and newer versions of ShopSite.
