### **Is it possible to set a limit for the number of products/page in ShopSite?**

Product: SC + TX

Version: 6.x and earlier

Platform: ALL

I'd like to limit the number of products per page in my ShopSite store so that additional pages are automatically created when the number of products assigned to a page reach this limit. The buyer could then use next/back buttons to flip through the multiple pages generated. Is this possible?Solution ID: S04606  
ShopSite does not currently include a feature that limits the number of products per page. An enhancement request has been submitted to consider adding this capability to a future release.

One method to improve the product display for the buyer is to break a very large, general category page such as "Rock" into multiple, more specific pages with links to the main page. For example, the main Rock page could contain links to pages titled "Rock A-D," "Rock E-H, " etc.

For more details regarding enhancement requests, see solution S04151.Solution ID: S04606
