

## **ShopSite Knowledgebase**

### **Is it possible to link the product search results directly to the More Info page?**

Product: Pro and Manager

Version: ALL

Platform: ALL

I'd like my customers to be able to use a link from the search results page that takes them directly to the More Info Page for a particular product. Right now it brings them to a page that includes the product (among other products). Is this possible with ShopSite? Solution ID: S05331

In ShopSite version 5.x and earlier, this is not possible.

Beginning with ShopSite v6.0, a Search Destination feature has been added to ShopSite Pro (not Manager) that allows you to select from several options, including the More Information Page of the product, as the search destination when the product appears in the search results. This setting can be found in the Products -> Edit Product Info screen or ShopSite Pro v6.x or greater ShopSite stores.
